

PLAN YOUR WIRING PROJECT

Based on the 2008 National Electrical Code® and Wisconsin's Electrical Code SPS 316

This brochure is only intended to be a general overview of residential electrical requirements in the State-Contracted areas of WISPECT LLC. Reasonable efforts have been made to ensure that this information is current, complete and accurate, however no claim is made that this information is beyond question. While there are many resources for do-itvourself owners, please refer to accredited sources for National Electrical Code® information and have your work inspected to assure your electrical installation will be free from fire and electrical shock hazard. SPS 316.950 Connection of electric service. CERTIFICATE REQUIRED. The electrical

wiring required to be inspected under s. SPS 316.940 (2) (a) may not be connected for use until a certificate is filed with the company or utility furnishing electric current. The certified inspector authorized to perform the inspection shall complete and file the certificate with the company or utility.

ELECTRICAL CONSTRUCTION & OPERATION

SPS 316.009 Construction and operation. (1)
GENERAL. All electrical power and communication
equipment and lines shall be constructed, installed,
operated and maintained so as to minimize hazards to
life and property. All electrical installations shall
conform to the National Electrical Code, incorporated
by reference in this chapter, and the requirements
specified in this chapter.

GENERAL CIRCUIT REQUIREMENTS

NEC 406.4 and 406.12 All 125-volt, 15- and 20- amp receptacles installed or replaced in dwelling units shall be listed tamper-resistant. Exceptions include a receptacle located more than 66-inches above the floor, a receptacle in space dedicated for an appliance that is not readily moved and replacement nongrounding receptacles.

NEC 210.12 All branch circuits supplying 125-volt, 15 and 20 amp outlets in dwelling unit family rooms, dining rooms, living rooms, parlors, libraries, dens, bedrooms, sunrooms, recreation rooms, closets, hallways, or similar areas shall be protected by a listed combination type AFCI device. AFCI protection is also required where branch circuit wiring in the above rooms is modified, replaced or extended.

SPS 316.210 (6) LIGHTING OUTLETS REQUIRED. Substitute the following wording for NEC 210.70 (A) (1): At least one wall switch-controlled lighting outlet shall be installed in every habitable room, kitchen and bathroom.

NEC 210.11 and 422.12 In addition to the branch circuits installed to supply general illumination and receptacle outlets in dwelling units, the following minimum requirements apply:

- Two 20-amp circuits for the kitchen receptacles
- One 20-amp circuit for the laundry receptacles
- One 20-amp circuit for the bathroom receptacles
- An individual branch circuit for central heating equipment

SPS 316.210 (3) BRANCH CIRCUITS REQUIRED. This is a department rule in addition to the requirements of NEC 210.11: Where an air conditioner sleeve is provided in a building wall, a receptacle outlet shall be located within 4 feet of the sleeve. If a circuit is not run to the outlet, a raceway shall be provided. When the air conditioner is installed in the sleeve, it shall be supplied by an individual branch circuit. May not be counted as one of the receptacles required by NEC 210.52 (A).

NEC 406.4 and 406.9 Receptacles installed in wet locations and receptacles in wet locations that are or replaced shall be listed as weather-resistant type.

NEC 300.3 All conductors of the same circuit, including grounding and bonding conductors, shall be contained in the same raceway, cable, or trench.

NEC 408.4 Every circuit and circuit modification shall be legibly identified as to its clear, evident and specific purpose or use in sufficient detail on a directory located on the face or inside of the electrical panel doors.

NEC 240.4 Conductors shall be protected in accordance with their ampacity per Table 310.16 and 240.4(D)

NEC 406.3 Receptacle outlets shall be of the grounding type, be grounded, and have proper polarity.

NEC 310.15 Maximum Overcurrent Protection
Fuse or Circuit Breaker Size Minimum Wire Size

. acc c. c. can bicano.	0.20		
	Copper	Aluminum	
15 amp	14	N/A	
20 amp	12	N/A	
30 amp	10	8	
40 amp	8	6	
50 amp	6	4	

Note: Conductors that supply motors, air-conditioning units, and other equipment may have overcurrent protection that exceeds the limitations in the above chart

NEC 210.52 Receptacle outlets in habitable rooms shall be installed so that no point measured horizontally along the floor line in any wall space is more than 6-feet from a receptacle outlet and in each wall space 2-feet or more in width.

NEC 210.52 At kitchen countertops, receptacle outlets shall be installed so that no point along the wall line is more than 24 inch measured horizontally from a receptacle outlet in that space. Countertop spaces separated by range tops, sinks or refrigerators are separate spaces.

NEC 210.52 A receptacle outlet shall be installed at each counter space 12-inches or wider and at each island counter or peninsular space greater than 24-inches by 12- inches. Receptacles shall be located not more than 20-12-inches below the countertop.

NEC 210.52 & 406.9 At least one receptacle accessible at grade level shall be installed at the front and back of a dwelling, and shall have a cover that is weatherproof whether or not an attachment plug cap is inserted.

NEC 210.52 Balconies, decks and porches, regardless of size, that are accessible from inside a dwelling unit shall have at least one receptacle installed within the perimeter.

GFCI PROTECTION

NEC 210.8 Ground-fault circuit interrupter (GFCI) protection shall be provided for all 125-volt, 15 and 20 amp receptacle outlets installed outdoors, in boathouses, garages, unfinished accessory buildings, crawl spaces at or below grade level, unfinished basements, bathrooms, at kitchen countertops and within 6' of the outside edge of all other sinks.

SPS 316.210 (2) GROUND-FAULT CIRCUIT-INTERRUPTER PROTECTION FOR PERSONNEL. (a) *Dwelling units*. Substitute the following wording for NEC 210.8 (A) (7): Laundry, utility, bedroom and wet bar sinks, where the receptacles are installed within 6 feet of the outside edge of the sink.(b) *Exception*. This is a department exception to the requirements in NEC 210.8 (A). Exception: Ground-fault circuit-interrupter protection shall not be required for a single receptacle providing power for sump or sewage pumps where an accessible ground-fault circuit-interrupter protected receptacle is located within 900 mm (3 ft) of the non-GFCI protected receptacle.

NEC 680.71 Hydro-massage bathtubs (a tub with a recirculating piping system designed to discharge water upon each use) and associated components shall be supplied by an individual branch circuit and shall have ground-fault circuit-interrupter protection.

NEC 680.71 All 125-volt receptacles rated not more

than 30 amps that are installed within 6 feet of the inside walls of a hydromassage bathtub shall be GFCI protected.

NEC 680.73 Hydromassage bathtub equipment shall be accessible without damaging the building structure or finish

When cord connected and accessible through an access panel, the receptacle shall be within 1-foot of the opening and shall face the opening.

NEC 680.21(C) All 15- and 20-amp, single-phase, 125-volt or 240-volt pool pump motors, whether cord connected or direct wired, shall be provided with GFCI protection.

WIRING METHODS

NEC 314.23 All electrical boxes shall be rigidly secured to the building structure.

NEC 314.27 Where spare conductors are installed to a location acceptable to a ceiling fan, a listed fan box shall be installed.

SPS 316.314 (2) OUTLET BOXES. This is a department rule in addition to the requirements of NEC 314.27 (A): In a dwelling unit, a ceiling outlet box installed for use as a lighting fixture outlet in a habitable room or kitchen and located where a ceiling fan could be installed shall be a type listed for ceiling fan support.

NEC 334.30 Type NM (nonmetallic) cables shall be secured every 4.5 feet and within 12 inch of each box. NEC 314.17 The outer jacket of type NM cable shall be secured to the box and extend into the box at least 1/4 inch.

SPS 316.210 (4) (b) *Dwelling units*. Substitute the following wording for NEC 210.12 (B) Exception No. 1: Where RMC, IMC, EMT or steel armored cable, Type AC or Type MC, meeting the requirements of 250.118 using metal outlet and junction boxes is installed for the portion of the branch circuit between the branch-circuit overcurrent device and the first outlet, a combination AFCI at the first outlet may be installed to provide protection for the remaining portion of the branch circuit.

NEC 300.14 The minimum length of conductors, including grounding conductors, at all boxes shall be 6 inches and extend at least 3 inches outside the box. NEC 300.4 Cables and raceways shall be protected from damage. Where installed through bored holes in wood framing members, the holes shall be bored so that the edge of the hole is not less than 1½ inch from the nearest edge of the wood member, or shall be protected by a 1/16 inch steel plate.

NOTE: Local building codes will help you determine where holes or notches may be safely made in joists. SPS 316.300 Wiring methods. (2) PROTECTION AGAINST PHYSICAL DAMAGE. The requirements specified in NEC 300.4 (D) are not included as part of this chapter.

NEC 300.22 Type NM cable shall not be installed in plenum spaces, but in dwelling units may be installed perpendicular through joist or stud spaces used as such

NEC 110.14 Only one conductor shall be installed under a terminal screw. In boxes with more than one grounding wire, the grounding wires shall be tied together with a "pigtail" attached to the grounding terminal of the device.

NEC 200.7(C) Where permanently re-identified at each location where it is visible and accessible, the conductor with white colored insulation in type NM cable may be used as an ungrounded conductor. NEC 250.134 All electrical equipment, including raceways, metal boxes and equipment shall be connected to an equipment grounding conductor. NEC 110.12 Unused openings in boxes shall be effectively closed. A non-metallic box shall be replaced if cable openings are punched but not used. NEC 408.41 Each grounded circuit conductor within a panelboard shall terminate in an individual terminal. NEC 404.2 The grounded conductor of lighting circuits shall be provided at each switch location, unless the wiring is installed in a raceway or the switch box remains accessible.

NEC 314.29 Junction boxes shall be installed so that the wiring contained in them can be rendered accessible without removing any part of the building. NEC 314.16 The number of conductors and devices contained within electrical boxes determine the size. Nonmetallic boxes are marked with their cubic inch capacity.

NEC 314.16 Minimum Size Of Outlet Boxes

	Conductor Size	
	14 AWG	12 AWG
Each insulated wire	2 in³	2.25 in ³
All ground wires (combined)	2 in³	2.25 in ³
Each device (switch/receptacle)	4 in³	4.4 in³
All internal cable clamps	2 in³	2.25 in ³

Example: a box with Four 14/2 w/ground type NMB cables:

8 insulated wires = 16 cubic inches

All ground wires = 2 cubic inches

- 1 switch = 4 cubic inches
- 1 receptacle = 4 cubic inches

All cable clamps (combined) = 2 cubic inches

Minimum Box Volume = 28 cubic inches

NEC 410.16 Luminaires in clothes closets shall have the following minimum clearances from the storage space.

- 12 inches for totally enclosed surface mounted incandescent or LED luminaires
- 6 inches for recessed totally enclosed incandescent, fluorescent or LED luminaires
- 6 inches for surface mounted or recessed fluorescent luminaires

Surface mounted fluorescent or LED luminaires listed for installation within the defined storage space are permitted.

NEC 410.2 Closet storage space is the area bounded by the sides and back closet walls extending from the closet floor to a height of 6-feet' or the highest clothes hanging rod and then out 24-inches from the sides and back of the closet walls respectively, and then continuing from there to the ceiling at a distance of 12-inches or the shelf width, whichever is greater.

NEC 410.16 Incandescent luminaires with open or partially enclosed lamps and pendant fixtures or lamp holders are not permitted in clothes closets.

NEC 410.10 Luminaires installed in wet or damp locations shall be marked as suitable for use in wet or damp locations, correspondingly.

EQUIPMENT LISTING AND LABELING

SPS 316.110 Requirements for electrical

installation. (1) INSTALLATION AND USE. Substitute the following wording for the requirements in NEC 110.3 (B): Listed or labeled equipment shall be installed or used, or both, in accordance with any instructions included in the listing or labeling, provided the instructions, listing or labeling do not conflict with this chapter.

NEC 110.3 All electrical equipment shall be installed and used in accordance with the listing requirements and manufacturer's instructions.

The Wisconsin Energy Conservation Code requires that all penetrations through an air barrier be sealed. Sealing of the opening applies to all penetrations including the service entrance, conduit, cables, panels, recessed luminaires and electrical boxes.

ELECTRICAL SERVICES

SPS 316.230 Services. (3) LOCATION. This is a department rule in addition to the requirements of NEC 230.70 (A): Raceways containing service conductors or cables, or service entrance cable not contained within a raceway, may not extend longer than 8 feet into a building to the service disconnect or the first service disconnect of a group of disconnects as permitted by NEC 230.71. The raceways or conductors shall be considered to have entered the building at the point where they pass through the outer surface of the building exterior, except as permitted by NEC 230.6. NEC 230.70 The service disconnecting means shall be installed at a readily accessible location either outside a building or structure or inside nearest the point of entrance of the service-entrance conductors.

NEC 310.15 Conductor Sizes For 120/240-Volt 3-Wire, Single-Phase, Dwelling Services And Feeders

		Service
Copper	Aluminum	Rating
4 AWG	2 AWG	100 Amps
1 AWG	2/0	150 Amps
2/0	4/0	200 Amps
400 kcmil	600 kcmil	400 Amps

NEC 110.14 Conductors of dissimilar metals shall not be intermixed unless the device is identified for the purpose. Listed anti-oxidant compound shall be used on all aluminum conductor terminations, unless the device manufacturer states that it is not required.

NEC 300.7 Portions of raceways or sleeves subject to different temperatures (i.e. passing from the interior to the exterior of a building) shall be sealed with an approved material to prevent condensation from entering equipment.

NEC 230.54 Service entrance and overhead service not enter the service enclosure.

NEC 300.9 The interior of raceways installed in wet locations above grade shall be considered wet locations.

NEC 300.4 Conductors 4 AWG or larger shall be protected by a bushing when entering an enclosure

through a raceway.

NEC 230.70 Service disconnecting means shall be readily accessible and shall not be located in a bathroom

NEC 240.24 Overcurrent devices shall not be located in bathrooms or in the vicinity of easily ignitable materials such as clothes closets.

NEC 408.36 Plug-in type overcurrent devices that are back-fed shall be secured by an additional approved device.

NEC 110.26 Sufficient working space shall be provided around electrical equipment. The depth of that space in the direction of access to live parts shall be a minimum of 3 feet and the minimum width of that space shall be the width of the equipment or 30 inches whichever is greater. This workspace extends from the floor to 6.5' and shall not be used for storage.

NEC 110.26 Illumination shall be provided for all working spaces about service equipment and panelboards.

GROUNDING AND BONDING

NEC 250.32 Buildings supplied by a feeder or branch circuit shall have an equipment grounding conductor run with the supply conductors and connected to the grounding electrode system at the building.

NEC 250.50 All grounding electrodes that are present at each building or structure shall be bonded together to form the grounding electrode system.

NEC 250.50 Acceptable grounding electrodes include a metal underground water pipe in direct contact with earth for 10 feet or more, a metal frame of a building or structure, a concrete encased electrode or a ground ring

NEC 250.53 A metal underground water pipe shall be supplemented by an additional electrode, such as a rod, pipe or plate electrode.

NEC 250.53 Unless a rod, pipe and plate electrode has a resistance to ground of 25 ohms or less, it shall be supplemented with another acceptable electrode.

SPS 316.250 Grounding and bonding. (1) RESISTANCE OF ROD, PIPE, AND PLATE ELECTRODES. Substitute the following wording for NEC 250.56: A single electrode consisting of a rod, pipe or plate shall be augmented by one additional electrode of any of the types specified 250.52 (A) (4) to (A) (8). Where multiple rod, pipe or plate electrodes are installed to meet the requirements of this section, they may not be less than 1.8 m (6 ft) apart.

NEC 250.66 The conductor that is the sole connection to a rod, pipe or plate electrode is not required to be larger than #6 AWG copper.

NEC 250.64 The grounding electrode conductor shall be continuous, securely fastened and protected from physical damage.

Equivalent Size of Service Size of the Grounding Entrance Conductor Electrode Conductor

Copper	Aluminum	Copper	Aluminum
4 AWG	2 AWG	8	6
1 AWG	2/0	6	4
2/0 or 3/0	4/0 or 250	4	2

NEC 250.28 The main bonding jumper - generally the green bonding screw provided by the panel manufacturer - shall be installed in the main service

panel.

NEC 250.104 The interior metal water piping and other metal piping that may become energized shall be bonded to the service equipment with a bonding jumper sized the same as the grounding electrode conductor.

UNDERGROUND WIRING

NEC 300.5 Direct buried cable or conduit or other raceways shall meet the following minimum cover requirements:

Direct Burial Cable	Rigid or Intermediate Metal Conduit	Non- Metallic Raceway (PVC)
24"	6"	18"

The minimum cover for 120-volt residential branch circuits rated 20 amps or less and provided with GFCI protection at their source is permitted to be 12-inches.

NEC 680.10 Underground wiring is not permitted under pools or within 5-feet horizontally from the walls of the pool, unless supplying permitted pool equipment.

NEC 300.5 Underground service laterals shall have their location identified by a warning ribbon placed in the trench at least 12" above the underground installation.

NEC 300.5 Where subject to ground movement, direct buried cables and raceways shall be installed with expansion capability to prevent damage to the enclosed conductors or to the connected equipment.

NEC 110.14 Wire splicing devices for direct burial conductors shall be listed for such use.

NEC 300.5 Conductors emerging from underground shall be installed in rigid metal conduit, intermediate metal conduit, or Schedule 80 rigid nonmetallic conduit from 18" below grade or the minimum cover distance up to the point of termination above ground.

SMOKE & CARBON MONOXIDE DETECTORS

A listed and labeled multiple station smoke alarm with battery backup shall be installed in all of the following locations: SPS 321.09 (1) (a) An alarm shall be installed inside each sleeping room.

- (b) On floor levels that contain one or more sleeping areas, an alarm shall be installed outside of the sleeping rooms, within 21 feet of the centerline of the door opening to any sleeping room and in an exit path from any sleeping room.
- (c) On floor levels that do not contain a sleeping area, an alarm shall be installed in a common area on each floor level.

SPS 321.097 (2) NEW CONSTRUCTION. (a) General. Except as provided in sub. (4), listed and labeled carbon monoxide alarms shall be installed and maintained in accordance with s. 101.647 (2) to (6), Stats., in one and 2-family dwellings, for which building permit applications were made or construction commenced on or after February 1, 2011.

Based on the Wisconsin's Electrical Code SPS 316

A rough-in inspection must be made before insulation, sheet-rock, paneling, or other materials cover any electrical wiring as required by SPS 316.940 (2) (b) 1. The installer shall schedule a final inspection when the electrical work is completed prior to the wiring being utilized and the space occupied as required by SPS 316.940 (2) (b) 3.
